

Export Sounds out of Audacity!

1. First, record something into audacity so that you have something you like. Decide whether you want to export the whole sound, or just a selection.

2a. If you want to use all the sound from your Audacity Project, click on **File -> Export**

2b. If you want to just use a smaller part, or a selection from your Audacity Project, highlight just that section, and click on **File -> Export Selection**

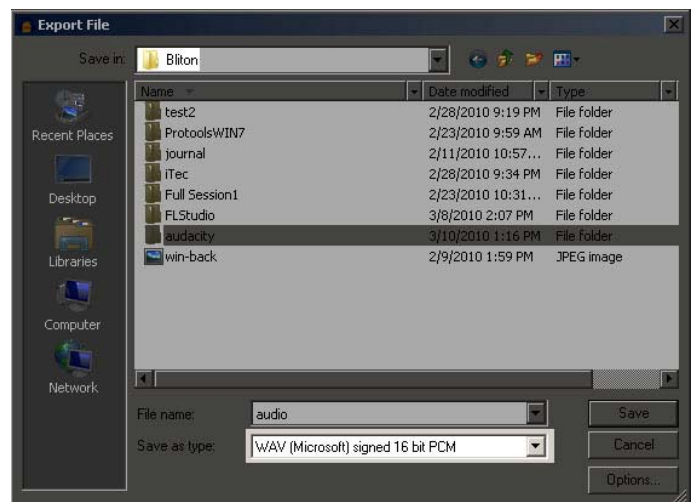

3. Find your folder under **My Documents**.

Then name your sound file.

Change "Save as type:..." to "**WAV (Microsoft)...**"

Click "**Save.**"

4. On the next window, click "**OK**"

The next window, titled "**Edit Metadata**" lets you say more about your sound file. When we make **mp3** files of our Audacity projects, we can put in our **Name, Title, Album**, etc...
